Sripaad Srinivasan

sripaad751@gmail.com | London, United Kingdom

Summary

Senior AI Engineer | AI Platform, Observability & Reliability | building production-grade, **evaluation-driven reliable AI systems** that support real-world products end to end. Turning unstructured data into **auditable intelligence and autonomous workflows**. I focus on reliability, observability, and correctness in regulated and high-accountability environments, spanning extraction, multi-step reasoning, tool orchestration, and adaptive validation - the practical core of modern agentic AI. Previously led high-throughput NLP systems with **98% accuracy** and **250k+ daily API calls** while maintaining long-running reliability. I maintain **open-source AI models** with **over 12M downloads** and hold an MSc in Artificial Intelligence (**Distinction**). Known for translating cutting-edge agentic AI trends and orchestration-first design into dependable real-world systems.

Experience

Saturn AI (YC 24 | Series A) | City of London
Founding AI Engineer | 02/2025 - Present
Architected and shipped AI-driven document intelligence systems for regulated fintech workflows, converting unstructured documents into structured, auditable reports used directly in customer-facing financial advice.

- Designed and deployed **production-grade agent workflows** for **regulated fintech** use cases, converting unstructured documents into auditable financial advice outputs used in live customer-facing systems.
- Owned production **AWS** & **Azure** infrastructure for LLM systems and agents, including **Bedrock** & Azure **Foundry** based deployments designed to meet EU data residency, reliability, and operational requirements.
- Reduced document processing time from **40 hours to 15 minutes** by architecting multi-step agent systems with deterministic extraction and structured generation powering financial advice generation across **50+ enterprise customers**
- **Established** engineering standards for prompt design, observability failure handling, and deployment safety for LLM systems
- Integrated agents with external systems and internal APIs to support **real-world financial workflows** under **regulatory constraints.**
- Built **production RAG** and **deep-agent workflows** that combine retrieval grounding, tool use, and multi-step reasoning with LangSmith observability, tracing, and prompt versioning creating reusable, debuggable AI capabilities and continuous evaluation loops to diagnose failures and eliminate silent quality regressions.
- Contributed across backend systems (Python/FastAPI), infra, and product decisions in a fast-moving startup environment

SilkWork | Cambridge Accelerate (2025 Cohort) | London / Cambridge
Founder | 10/2024 - 02/2025
Founded an early-stage AI company in the Future of Work space, and the technical lead responsible for system architecture, model design, and product feasibility, owning both product vision and technical architecture

- Built **early-stage AI product** exploring agent-driven hiring workflows, combining AI decision-making with human validation loops
- Designed **agents** to analyse unstructured candidate data (CVs, signals, behavioural traits) for hiring decisions
- Defined system architecture for agent-based evaluation of subjective signals such as role fit, communication, and team alignment
- Developed initial prompt systems, evaluation criteria, and failure mode analysis for human-in-the-loop AI systems
- Led **end-to-end product thinking**, translating ambiguous hiring workflows into structured, testable AI systems

AI4Privacy | London, United Kingdom
NLP Research Engineer | 06/2024 - 10/2024

- Developed **SOTA** transformer-based NER systems achieving 30% accuracy improvement, with models reaching **12M+ downloads** on Hugging Face
- Built scalable ML pipelines on GCP, focusing on performance, reliability, and privacy-preserving training techniques
- Worked on **interpretability and evaluation** of LLM systems to improve transparency and reduce sensitive data leakage
- Collaborated across teams to productionise models and improve ML lifecycle workflows

Zoho Corporation | Chennai, India
Deep Learning Engineer(NLP) | 03/2021 - 09/2023
Expertise in building, improving, and extending NLP capabilities.

- Built and deployed production NLP systems improving model accuracy by 20% and efficiency by 25%
- Designed high-throughput APIs handling 250k+ daily requests, improving search relevance and customer insights
- Developed generative AI features including email generation and style transfer systems used in live products
- Improved system performance and latency by 30% using Docker, Kubernetes, and optimized model serving
- Applied strong software engineering practices (CI/CD, testing, version control) to ensure reliability at scale
- Mentored 5+ engineers and contributed to team-wide improvements in deployment and model optimisation

Skills

Python, TypeScript, FastAPI, React, Node.js, LangGraph, Agent Design, Prompt Engineering, Tool Use, Multi-step Reasoning, Claude Agent SDK, Vertex AI, Structured Outputs, RAG, Evaluation Pipelines, AWS, Docker, EKS, Vector Databases(Qdrant, Chroma), PostgreSQL, Langfuse, LogFire, Pydantic, Event-driven systems, API Design

Education

Royal Holloway University Of London | London
Msc Artificial Intelligence | 09/2024

- **Grade:** Distinction (Top 5%)
- **Recipient of the Computer Science Scholarship (2024)**: Recognized for academic excellence and contributions to the field of computer science.
- **Coursework Focus:** Deep Learning, Natural Language Processing, Agentic Modelling, and Multi-Agent Systems
- **Master's Dissertation**: Developed FocusNet, a compact transformer-based Named Entity Recognition (NER) model that identifies arbitrary entity types via natural language instructions. FocusNet outperforms larger models like ChatGPT in zero-shot NER benchmarks, combining the flexibility of instruction-based NER with the efficiency needed for resource constrained applications.

Anna University | Chennai, Tamil Nadu
Bachelor of Engineering in Computer Science and Engineering | 11/2020

- Organising Head SaacHack'19 and PR Head SaacHack'18 a 24hr National Level Hackation Series.
- President of the Code Club & Joint Secretary English Literary Club.
- Creative Editor of Lumos Magazine (a English Literary Club Magazine)
- Certified in Oracle PL/SQL

Awards and Achievements

- **1st Place, HeatGeek Hackathon (2024):** Led a team to design a multimodal AI tool for heat pump placement optimization, winning top honors at the inaugural event.
- **Academic Student Representative, Royal Holloway:** Advocated for curriculum improvements and student needs, influencing departmental policy decisions.
- **Organized National Hackathon:** Coordinated a 70+ participant event focused on AI innovation, fostering collaboration across 15+ teams.
- **Top 10% Kaggle Competitor:** Ranked highly in NLP and Deep learning challenges, demonstrating advanced problem-solving skills.
